

- **S** = Statement / fact
- **E** = explanation
- **X** = example

**E.g. Statement** - One of the types of adaptations that living things have is structural adaptations.

**Explanation** - A structural adaptation is a special feature of the body or physical make-up that helps the organism to survive in its habitat.

**Example** - A snail has a hard shell to protect it from predators like birds and to stop it from drying out.
